

WELCOME **NEXT**

Broadpin, our technology partner for Oracle Cloud

At WelcomeNext, we build cloud-based solutions for the distribution, protection and tracking of digital learning content. Our products, including scormPROXY and scormPLAYER, are used by training providers, companies and learning platforms that need reliable, scalable and secure e-learning technology.

To support this mission, we rely on a modern cloud infrastructure based on Oracle Cloud Infrastructure, together with the expertise and managed services of Broadpin.

Broadpin is our technology partner for the design, operation and continuous improvement of the cloud infrastructure behind our solutions.

A cloud foundation built for e-learning

Our solutions are designed to deliver training content to external LMS platforms, corporate learning environments and users in different countries. This requires an infrastructure capable of supporting high availability, strong security, global content delivery and scalable performance.

With the support of Broadpin, WelcomeNext migrated and evolved its infrastructure to Oracle Cloud Infrastructure, creating a more robust foundation for current operations and future growth.

This cloud architecture helps us provide a stable and secure platform for our customers, while allowing our internal team to focus on product development, innovation and customer experience.

— Oracle Cloud Infrastructure

MANAGED BY
BROADPIN

How Broadpin supports WelcomeNext

Broadpin supports WelcomeNext across the full lifecycle of our cloud infrastructure, from initial design and migration to ongoing operations and continuous improvement.

Their role includes:

-  Cloud architecture and deployment on Oracle Cloud Infrastructure.
-  Migration and implementation of production and development environments.
-  Database management, including Oracle MySQL Database Service.
-  High availability and scalability, using cloud-native infrastructure components.
-  Security and application protection, including network controls, private subnets, encryption and WAF protection.
-  Proactive monitoring and incident management to detect and resolve potential issues.
-  Ongoing support and maintenance from Oracle Cloud and database specialists.

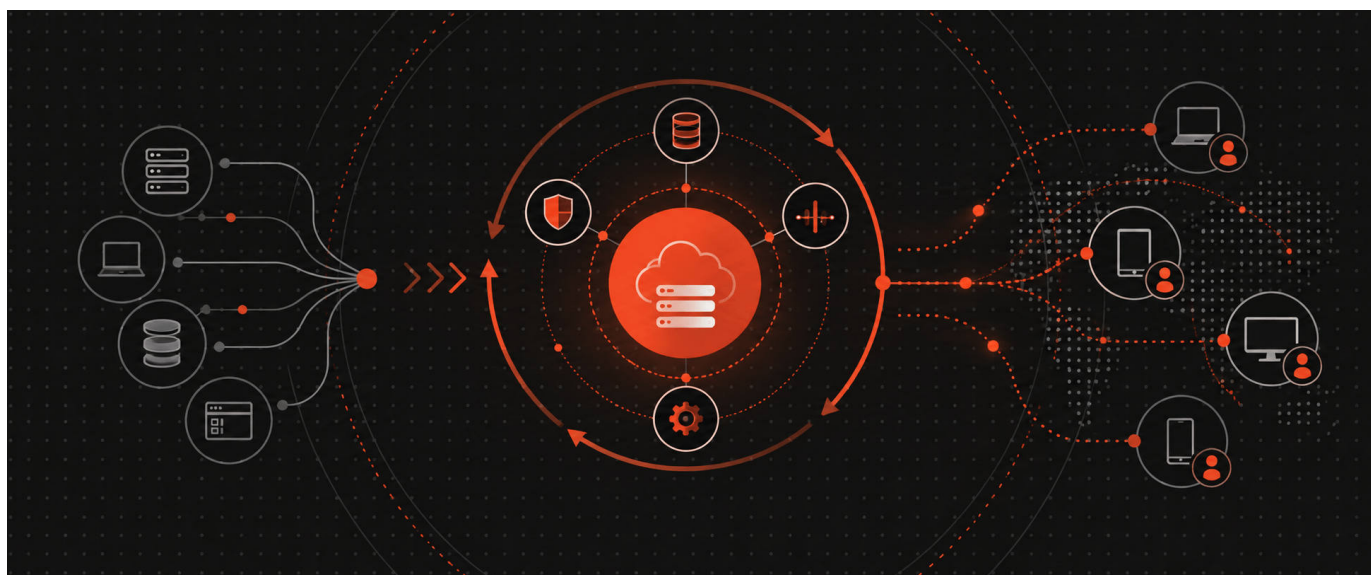

More than a migration

The collaboration between WelcomeNext and Broadpin began with a cloud modernization and migration project. The goal was not only to move systems to the cloud, but to build a more flexible, secure and scalable platform for the long term.

After the initial migration, the relationship evolved into an ongoing managed services model. Today, Broadpin provides technical support, database administration, infrastructure monitoring and operational assistance for our cloud environment.

This is especially important for WelcomeNext because our customers rely on our platform to distribute training content, track learner activity and maintain access to courses across different systems and geographies.

Key benefits for WelcomeNext and our customers

Reliability

Our infrastructure is designed to support stable operation and business continuity for cloud-based e-learning services.

Scalability

The architecture allows us to scale resources according to demand and support future growth as our products and customer base evolve.

Security

Security controls, private network architecture, encryption and application protection help us safeguard critical systems and data.

Performance

Cloud infrastructure and distributed content delivery help provide efficient access to training content from different regions.

Operational control

Proactive monitoring and expert support give us greater visibility over the infrastructure and help reduce operational risk.

Focus on product innovation

By relying on Broadpin for infrastructure management and support, our internal team can focus on improving scormPROXY, scormPLAYER and the rest of our e-learning technology ecosystem.

WELCOMENEXT TESTIMONIAL

Broadpin, has been a key partner in the evolution of our cloud infrastructure. Their team helped us migrate to Oracle Cloud Infrastructure, design and implement the architecture, and put in place the services required to operate scormPROXY with greater scalability, security and availability.

Beyond the initial project, Broadpin now provides us with ongoing support, maintenance and proactive monitoring of our infrastructure. For WelcomeNext, it is essential to have a partner that understands our environment, supports our operations and helps us keep our platform ready for future growth."

 **WelcomeNext Team**

About Broadpin

Broadpin is a global Oracle technology partner that brings together the experience of several specialist companies. The company provides consulting, cloud infrastructure, modernization, managed services and technology support for organizations working within the Oracle ecosystem.

For WelcomeNext, Broadpin combines specialized Oracle Cloud expertise with a managed services approach that helps us operate a secure, scalable and reliable technology platform.
